6.889 Reports received

- 6.637 STANDARD 100
- 144 ECO PASSPORT
- 93 MADE IN GREEN
- 15 LEATHER STANDARD

4.709 Certificates/ Labels checked

- 4.481 STANDARD 100
- 128 ECO PASSPORT
- 87 MADE IN GREEN
- 13 LEATHER STANDARD

11.065 Number of samples tested

- 10.713 STANDARD 100
- 238 ECO PASSPORT
- 88 MADE IN GREEN
- 26 LEATHER STANDARD

47.895 Number of tests performed

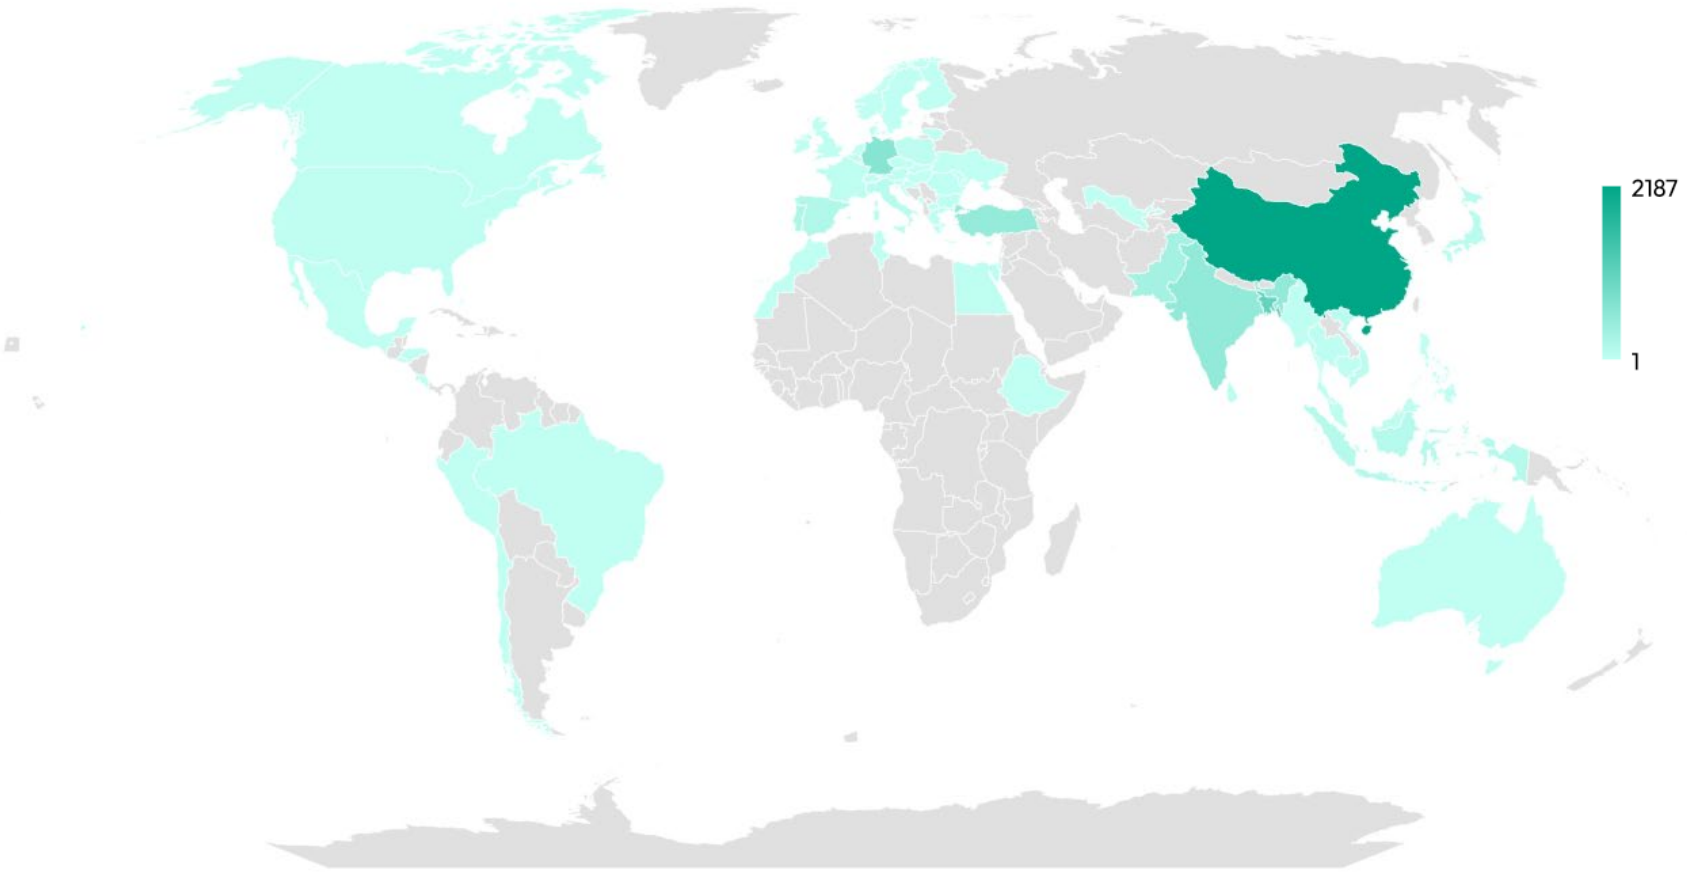
- 46.597 STANDARD 100
- 705 ECO PASSPORT
- 489 MADE IN GREEN
- 104 LEATHER STANDARD

Summary over all failed test reports

	Failed test reports	Failed samples	Failed parameter
2022/2023	9.2 %	5.9 %	1.7 %
2021/2022	11.1 %	6.8 %	2.0 %
2020/2021	8.7 %	6.1 %	1.9 %
2019/2020	8.6 %	6.4 %	2.1 %

Certificate origin

Origin of checked certificates and labels



The TOP 10 countries were

- China
- Bangladesh
- Germany
- India
- Turkey
- Pakistan
- Portugal
- Spain
- Hong Kong
- South Korea

South Korea replaced Italy in the TOP 10 compared to last year.

Self control rate

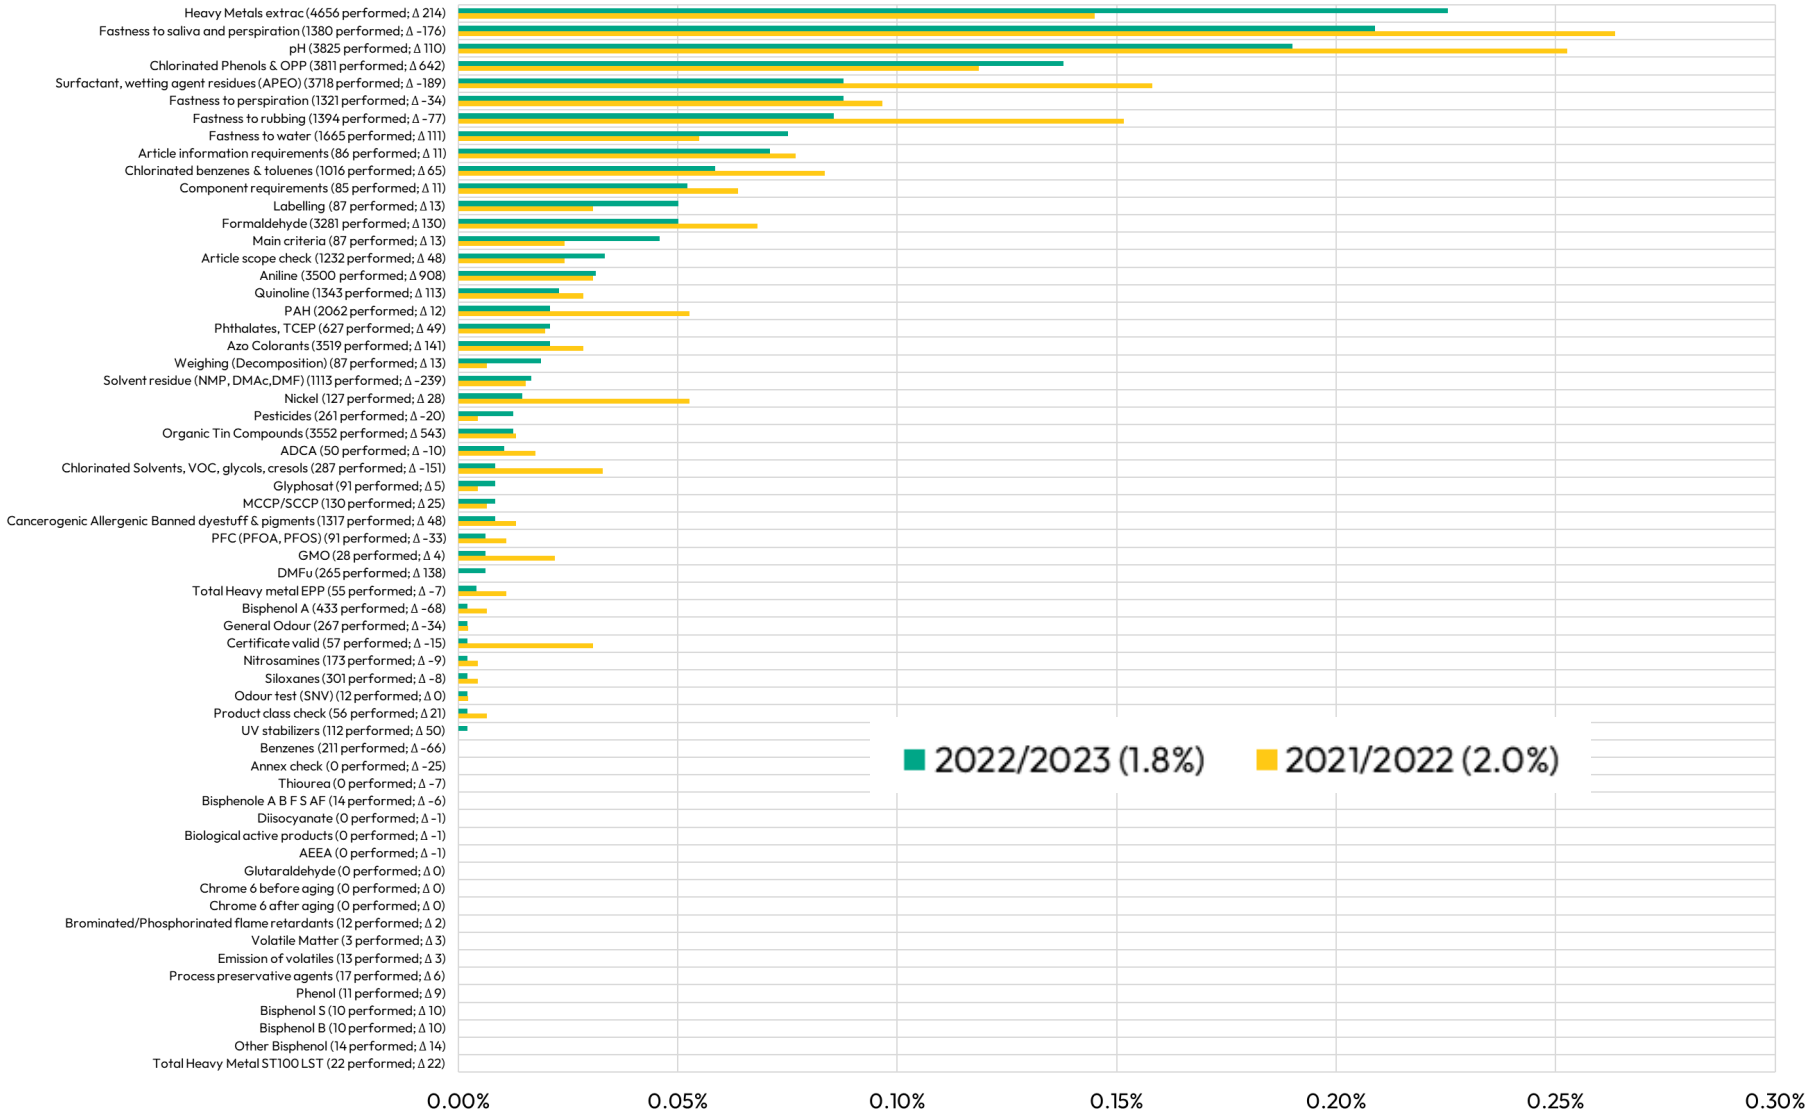
Overall the self control rate increased since last year.

As a reminder, the samples should be taken from:

- Retail shops
- Suppliers (checking of base certificates)
- Certificate holder on occasion of a Site Visit (random sample picking by the auditor)

Sample shall not be picked as a courtesy to the certificate holder or as a way to save cost for certification.

Failed and performed parameter



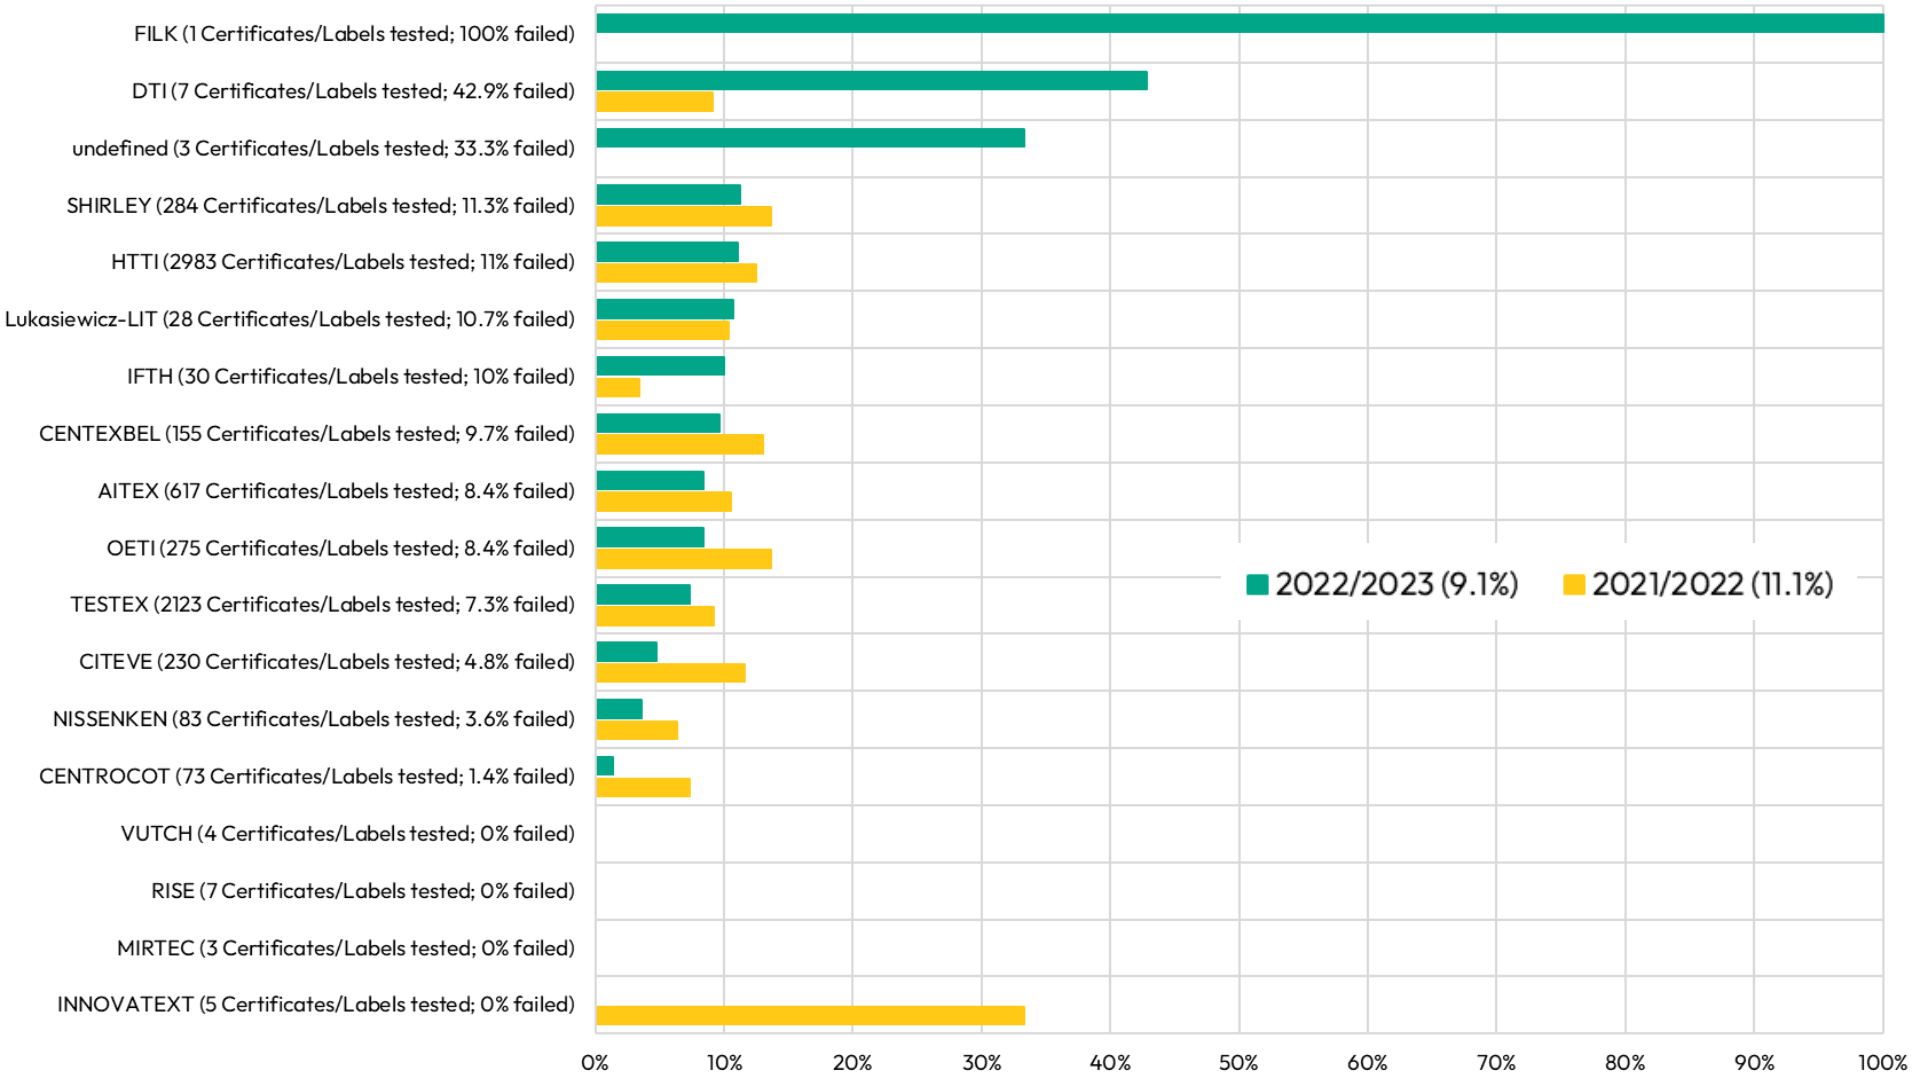
Most performed parameter was extractable heavy metals. Compared to last year aniline shows the highest increase in testing frequency (+908) while Solvent residue (NMP, DMAc, DMF) decreased (-239).

Δ describes the difference in the number of performed tests compared to last year.

The TOP 5 failed parameter were:

- Heavy metals Extractable
- Fastness to saliva/perspiration
- pH-value
- Chlorinated Phenols and OPP
- Surfactant, wetting agent residues

Failed certificates and labels per institute



This graph shows the number of checked failed certificates and labels per institute.

It includes all OEKO-TEX® products.

Chlorinated Phenols and OPP

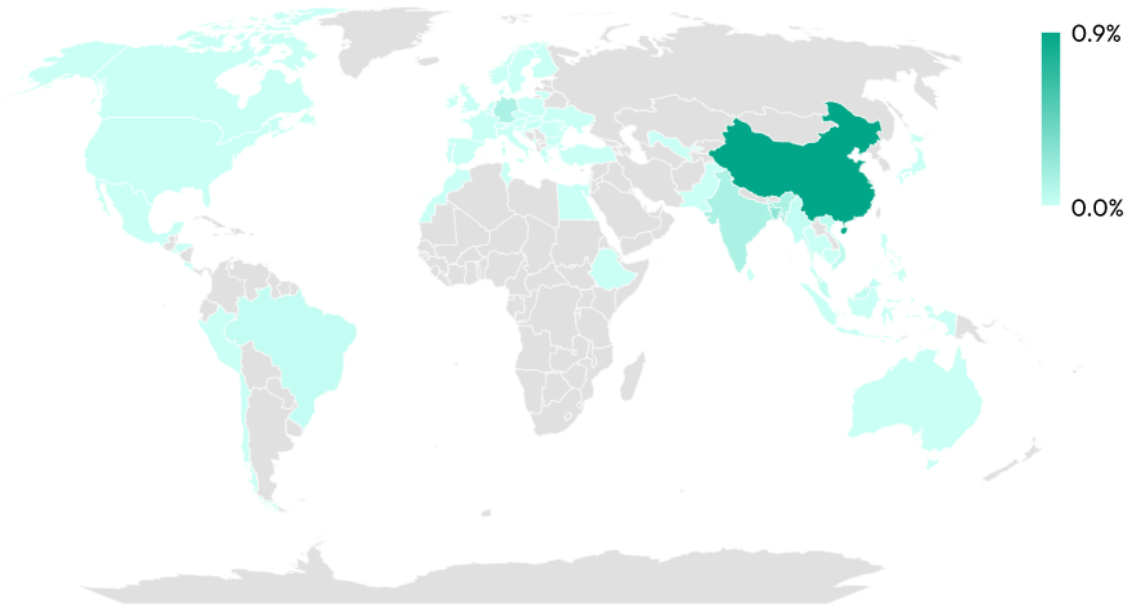
Overall chlorinated phenols and OPP was tested 3811 times (+639 compared to last year). There were no fails in the LEATHER STANDARD (7 tests), therefore the deeper analysis is focused on the STANDARD 100 and ECO PASSPORT.

For STANDARD100 the testing was performed 3724 times and failed 61 times (1.64%). This is an increase to last year, both in performed testing (+601) and in % fails (1.63% to 1.64%).

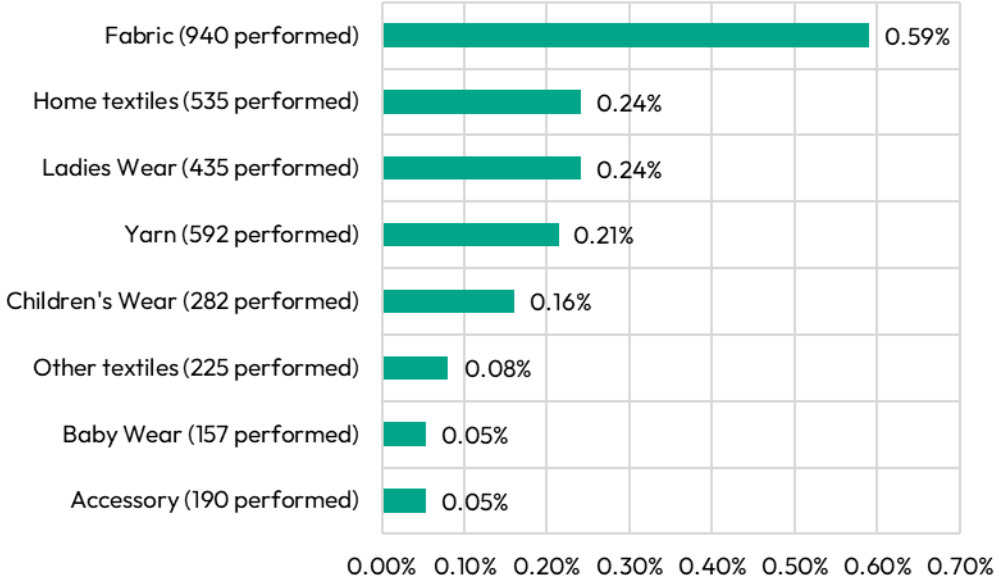
For ECO PASSPORT the testing was performed 80 times and failed 5 times (6.25%). This is an increase in performed testing (+33) and a decrease in % fails (6.38% to 6.25%) when compared to last year.

Chlorinated Phenols and OPP – STANDARD 100

Chlorinated Phenols & OPP - STANDARD 100
% failed per country

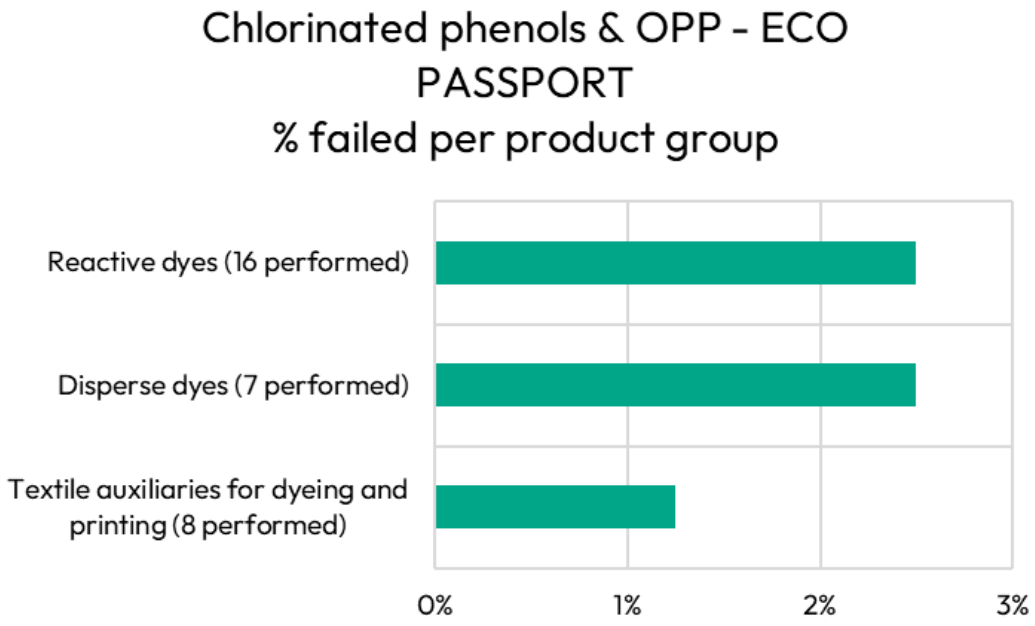


Chlorinated phenols & OPP - STANDARD100
% failed per product group



Highest fail rates were in product class I (1.40%), annex 6 (0.99 %) and in samples procured from suppliers (0.81%). However, the fail rate in samples procured from retail is a close second (0.75%).

Chlorinated Phenols and OPP – ECO PASSPORT



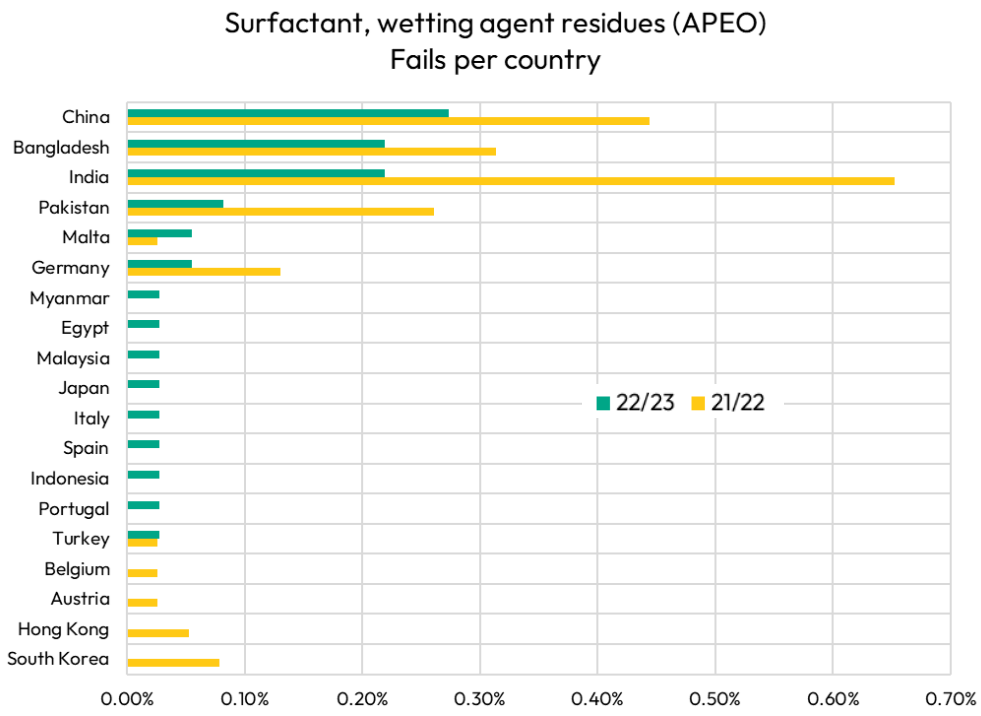
Since the number of performed tests for the ECO PASSPORT was much lower than for the STANDARD 100, the number might not be as representative.

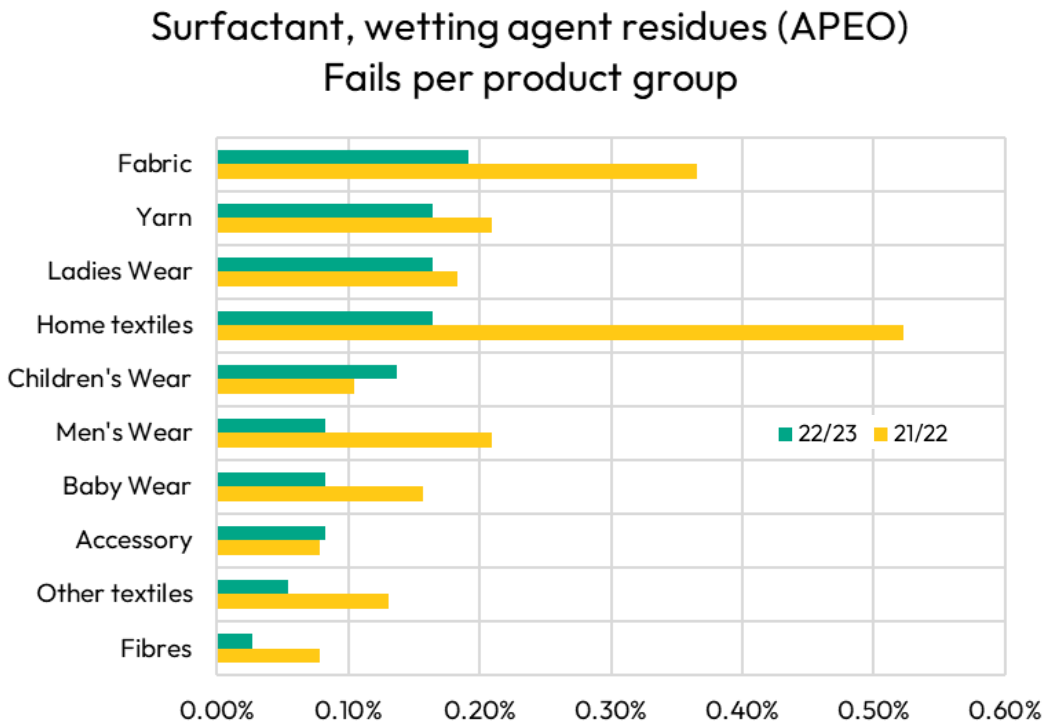
Fails for chlorinated phenols and OPP were reported from only two countries: China (performed 27 times, 4 fails) and India (performed 13 times, 1 fails). These are also the countries with the most performed testing for this parameter.

Only HTTI has reported fails (test was performed 37 times). No other institutes submitted samples with failed testing for chlorinated phenols and OPP. Testex has provided a similar amount of reports, tested the parameter slightly less, and has not reported any failures. Shirley, OETI and Citeve, did not test for chlorinated phenols and OPP, however, they supplied less reports overall (OETI and Citeve 1, Shirley 4).

The test was performed 39 times on certificates issued by HTTI. 4 of these failed. It was also performed 27 times on certificates issued by Testex, where only 1 failed.

Surfactant, wetting agent residues





Overall surfactant, wetting agent residues (APEO) was tested 3718. There were no fails in the ECO PASSPORT (60 tests) and LEATHER STANDARD (4 tests), therefore the deeper analysis is focused on the STANDARD 100. All graphics are based on STANDARD 100 data.

For STANDARD100 the testing was performed 3654 times and failed 42 times (1.15%). This is a reduction to last year, both in performed testing (-173) and in % fails (1.88% to 1.15%).

Highest fail rates were in product class I (0.85%), annex 6 (0.6 %) and procured from retail (0.57%).

OEKO TEX®

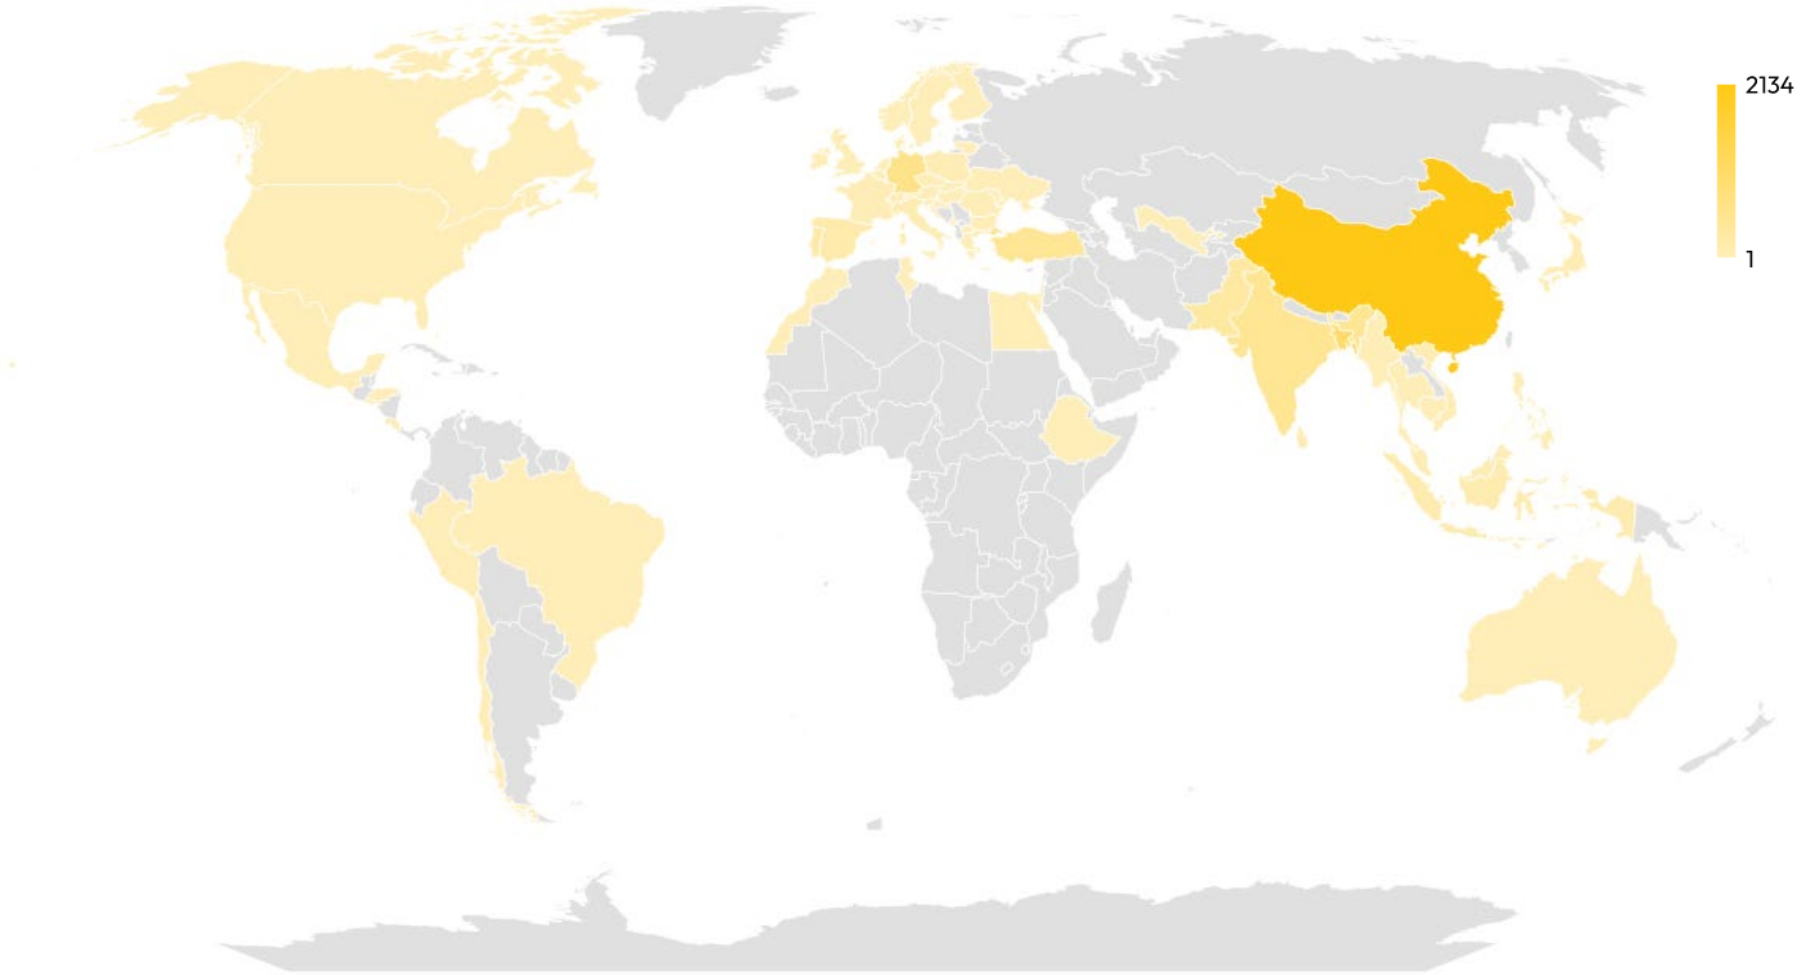
STANDARD 100

Control testing results

Summary over failed test reports STANDARD 100

	Failed test reports	Failed samples	Failed parameter
2022/2023	8.3 %	5.4 %	1.5 %
2021/2022	10.4 %	6.4 %	1.8 %

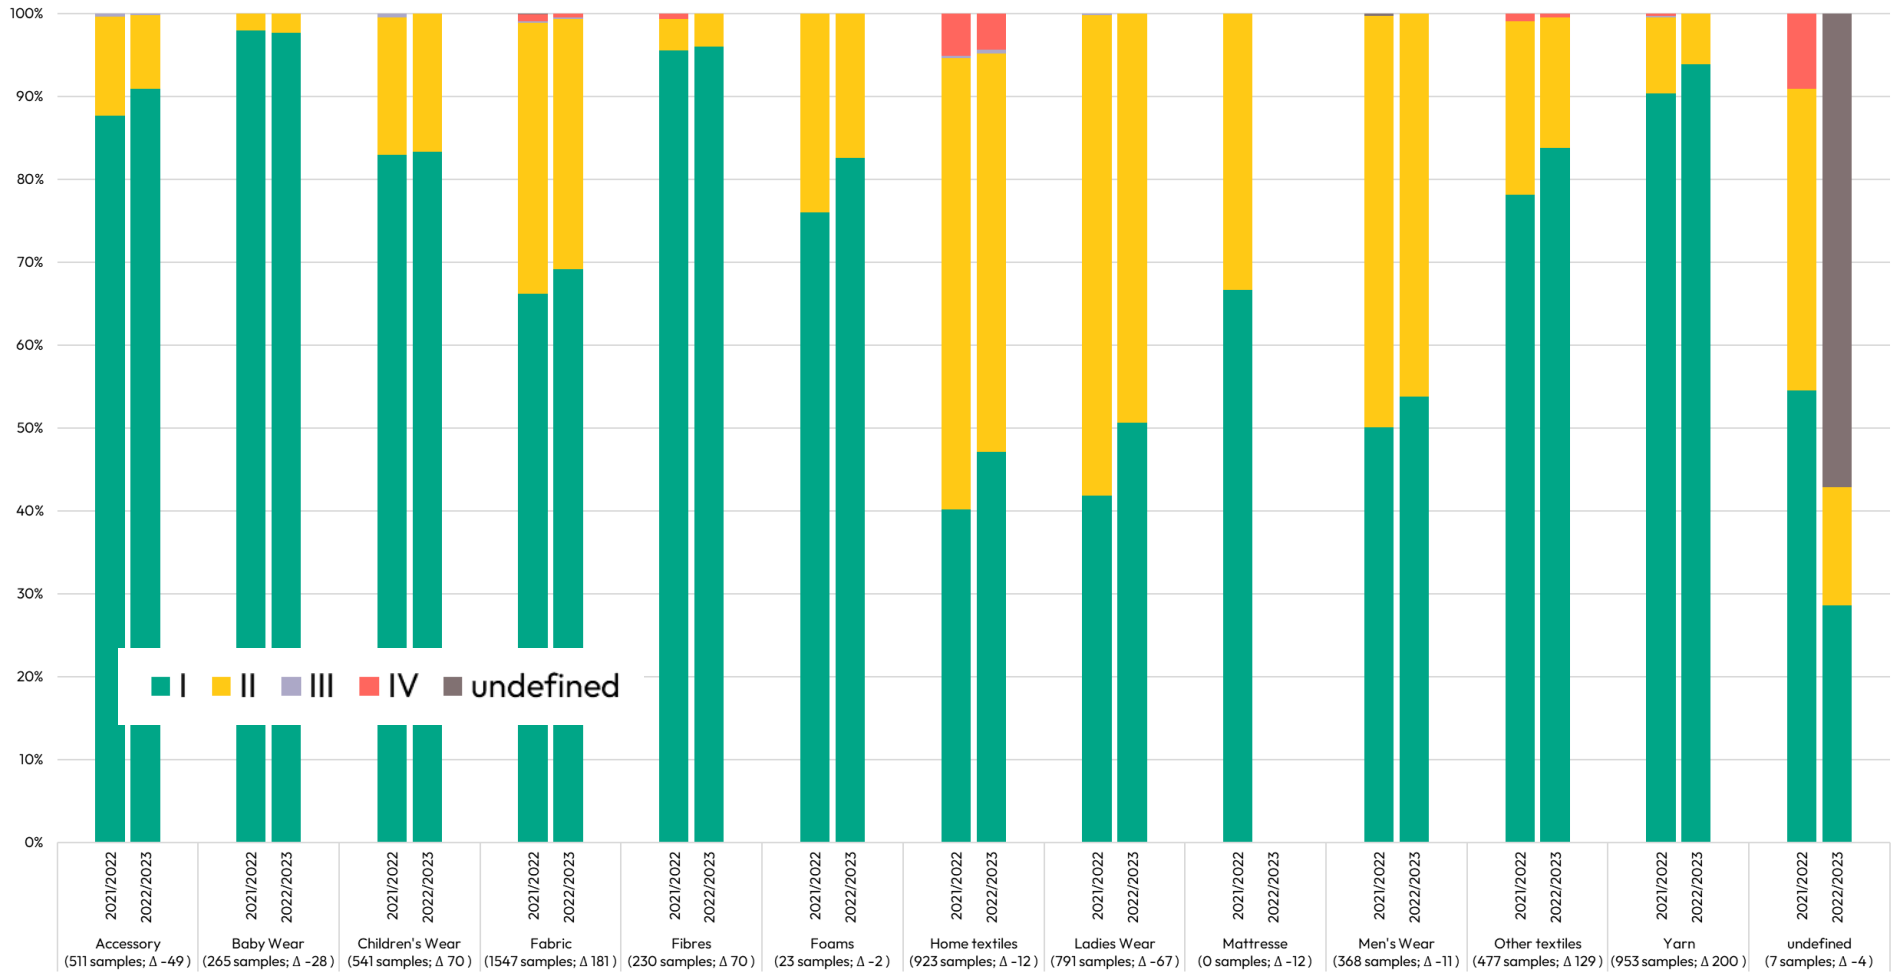
STANDARD 100 - Certificate origin



The TOP 10 countries were

- China
- Bangladesh
- Germany
- India
- Turkey
- Pakistan
- Portugal
- Spain
- Hong Kong
- South Korea

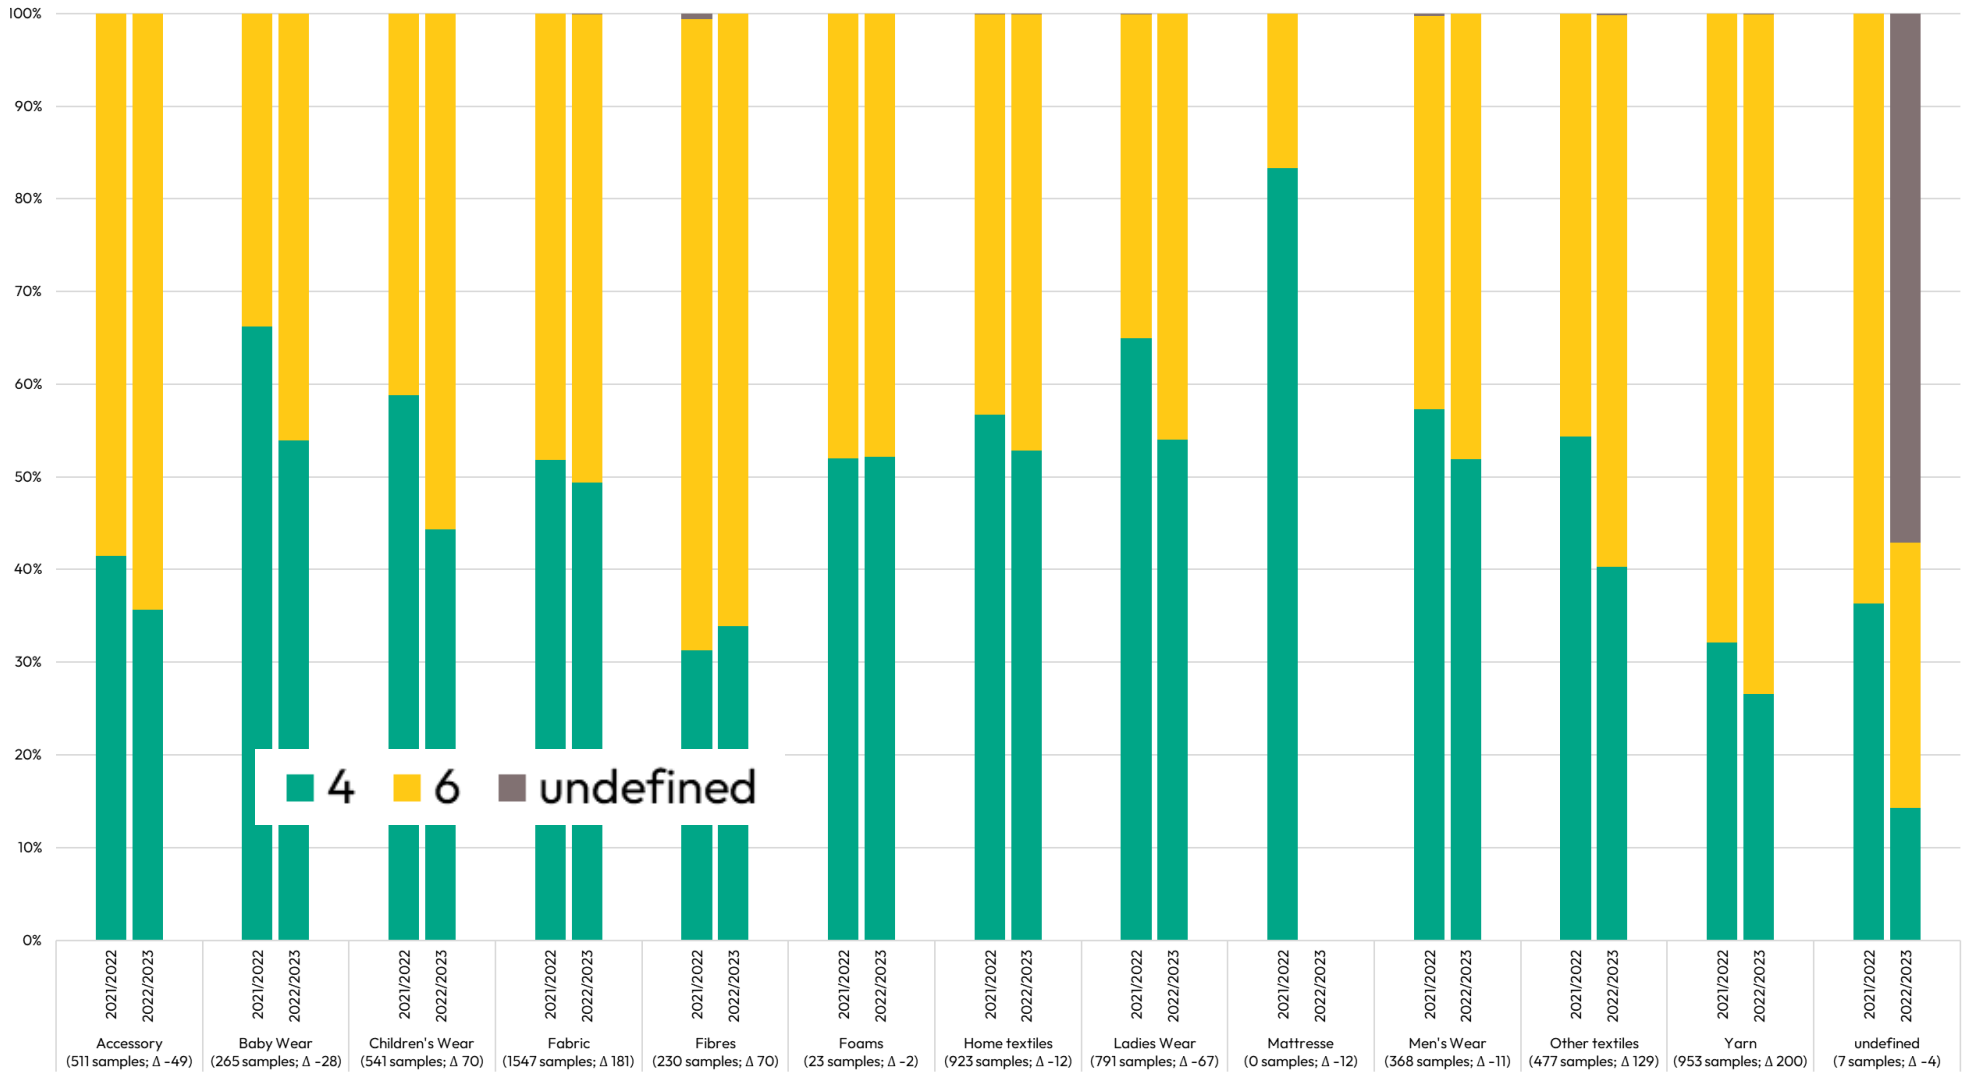
STANDARD 100 - Product class and group



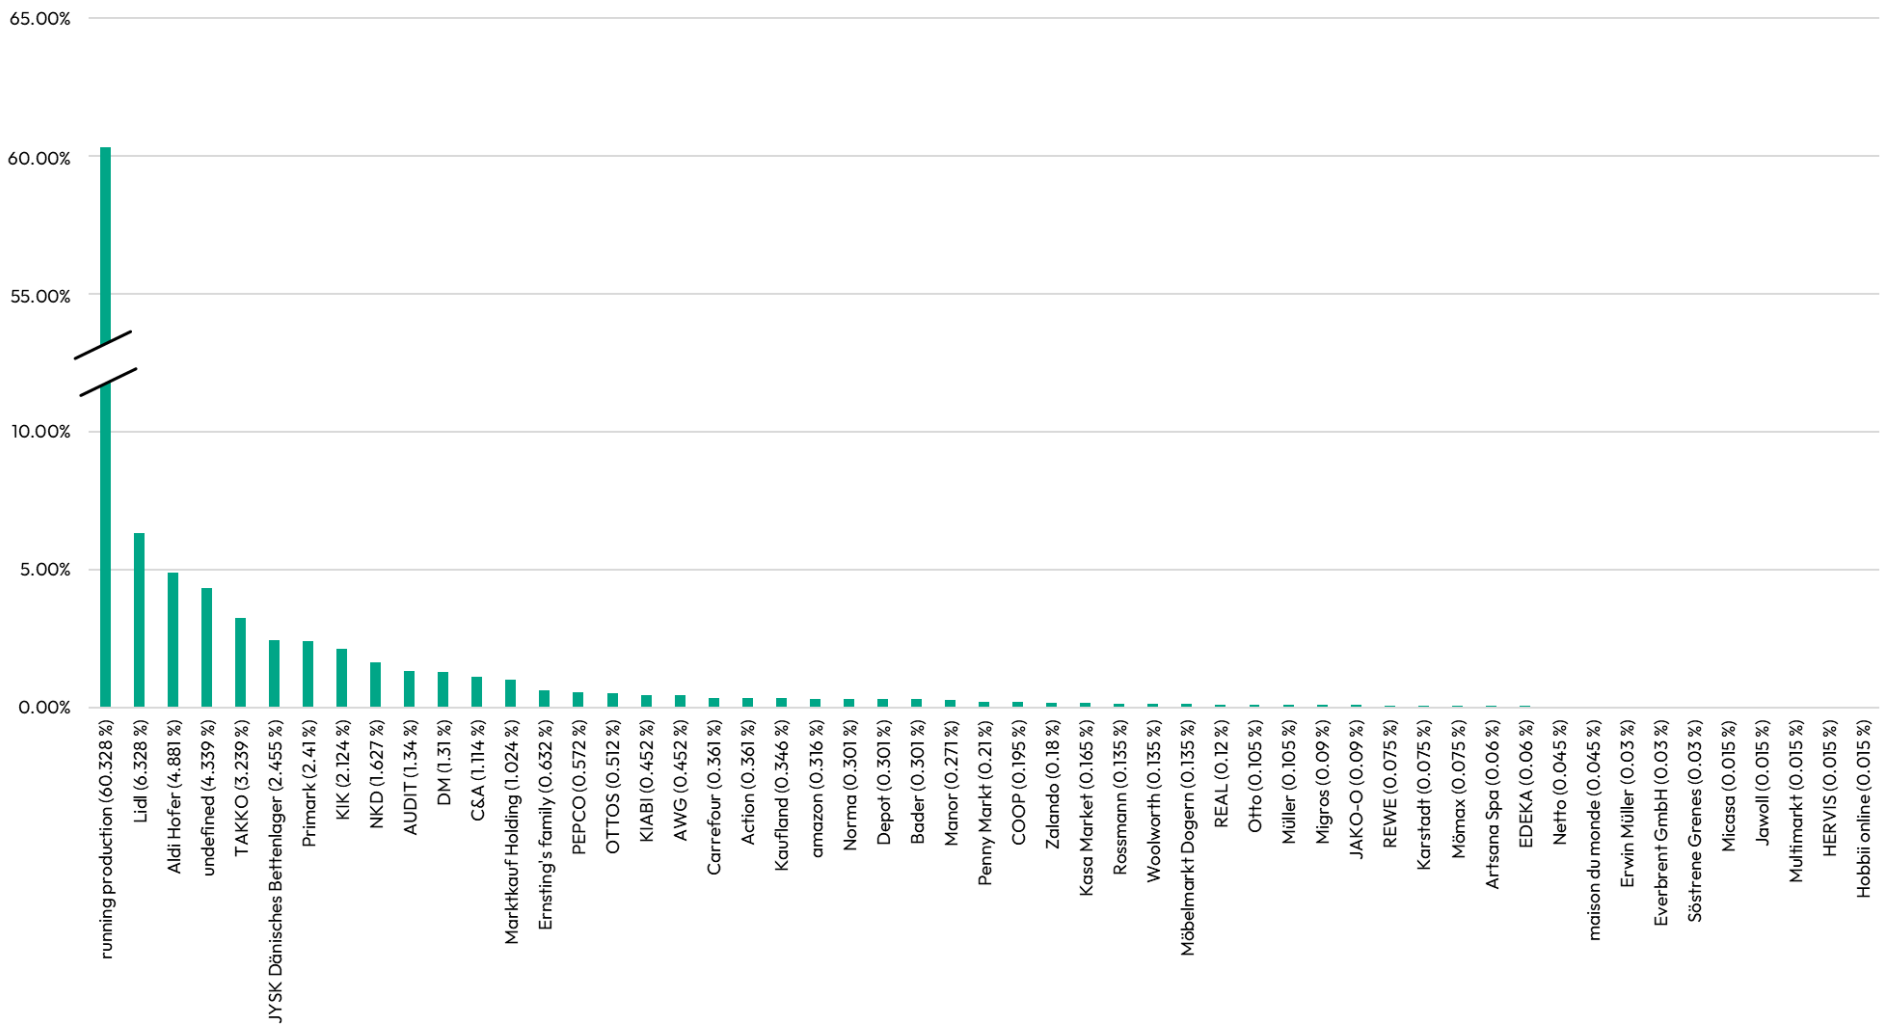
The most samples were tested in the product group fabric and no mattress samples were checked.

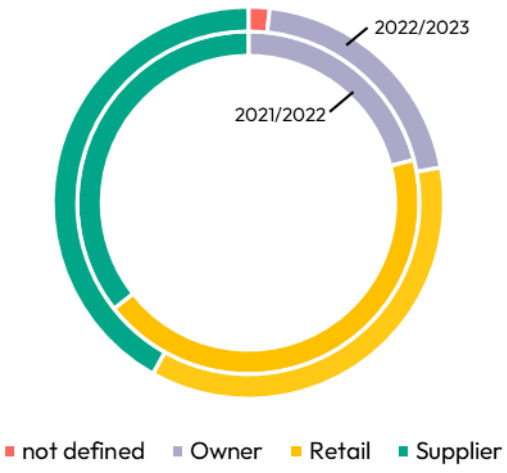
Δ describes the difference in the number of performed tests compared to last year.

STANDARD 100 - Annex and group



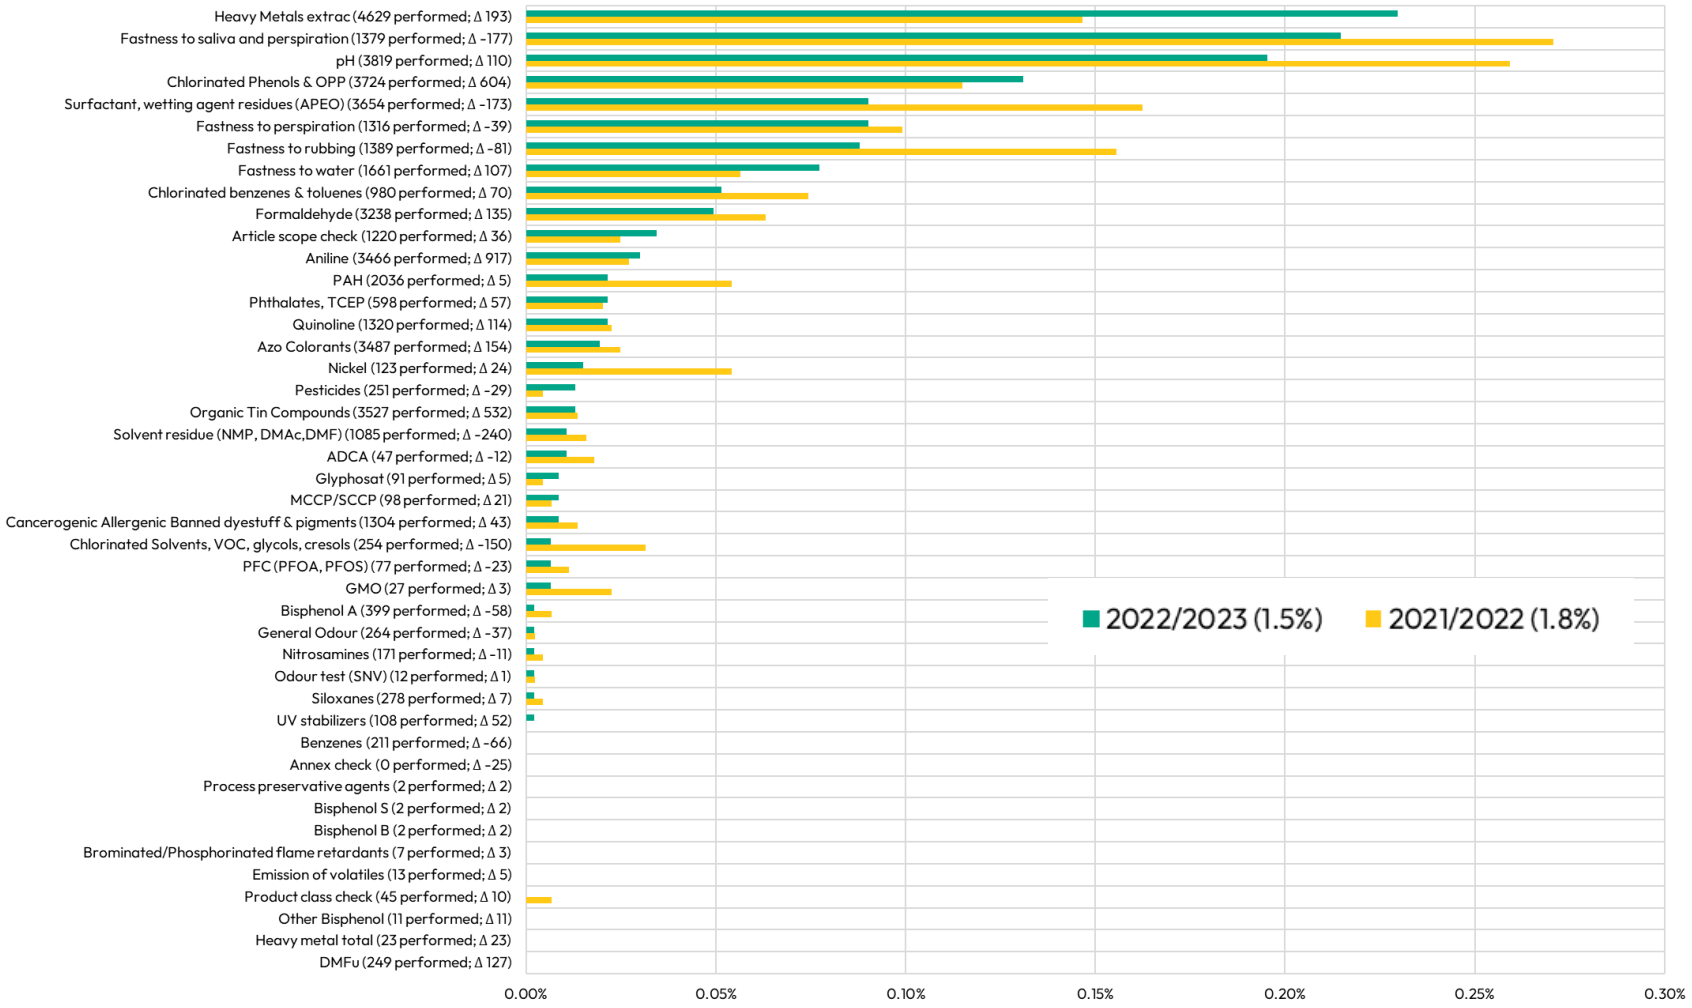
STANDARD 100 - Stores and sources





The inner circle represents the data from 2021/2022

STANDARD 100 - Failed parameter



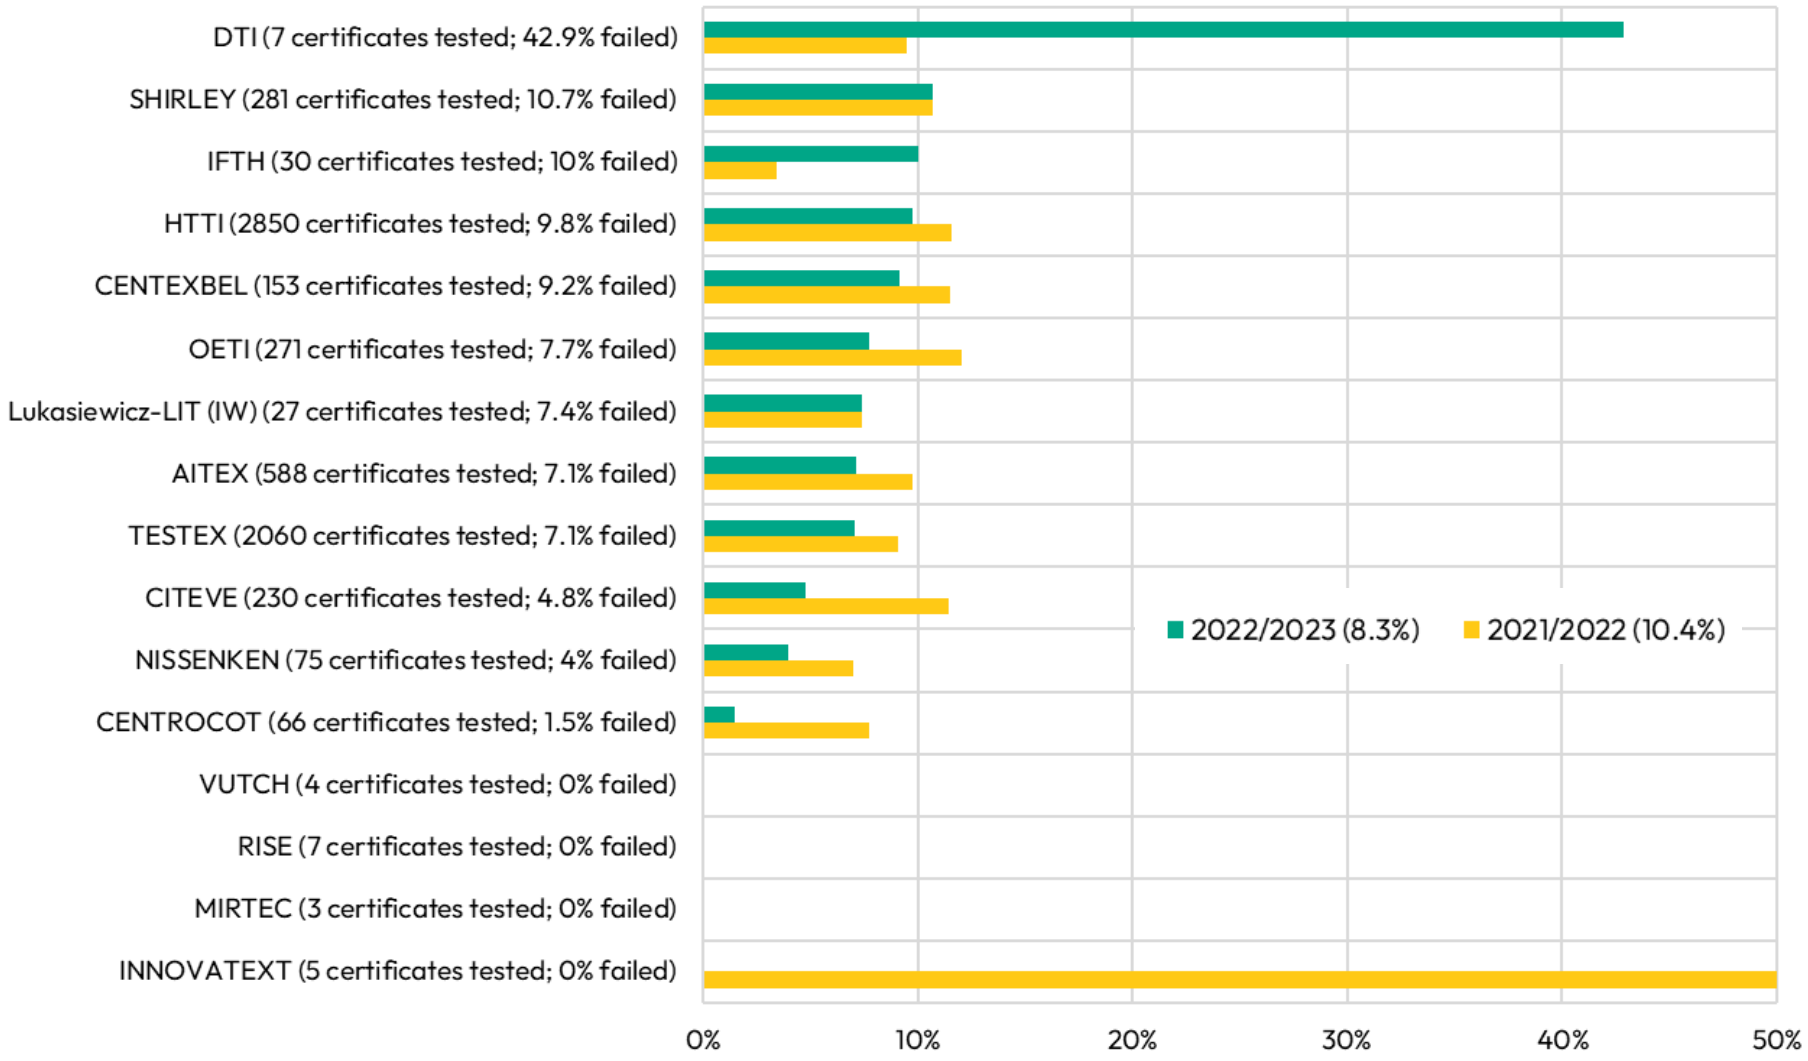
Most performed parameter was extractable heavy metals. Compared to last year aniline shows the highest increase in testing frequency (+917) while Solvent residue (NMP, DMAc, DMF) decreased (-240).

Δ describes the difference in the number of performed test compared to last year.

The TOP 5 failed parameter were:

- Heavy metals Extractable
- Fastness to saliva/perspiration
- pH-value
- Chlorinated Phenols and OPP
- Surfactant, wetting agent residues

STANDARD 100 – Failed certificates per institute



Overall 8.3% of the tested certificates failed. This is less than last year.

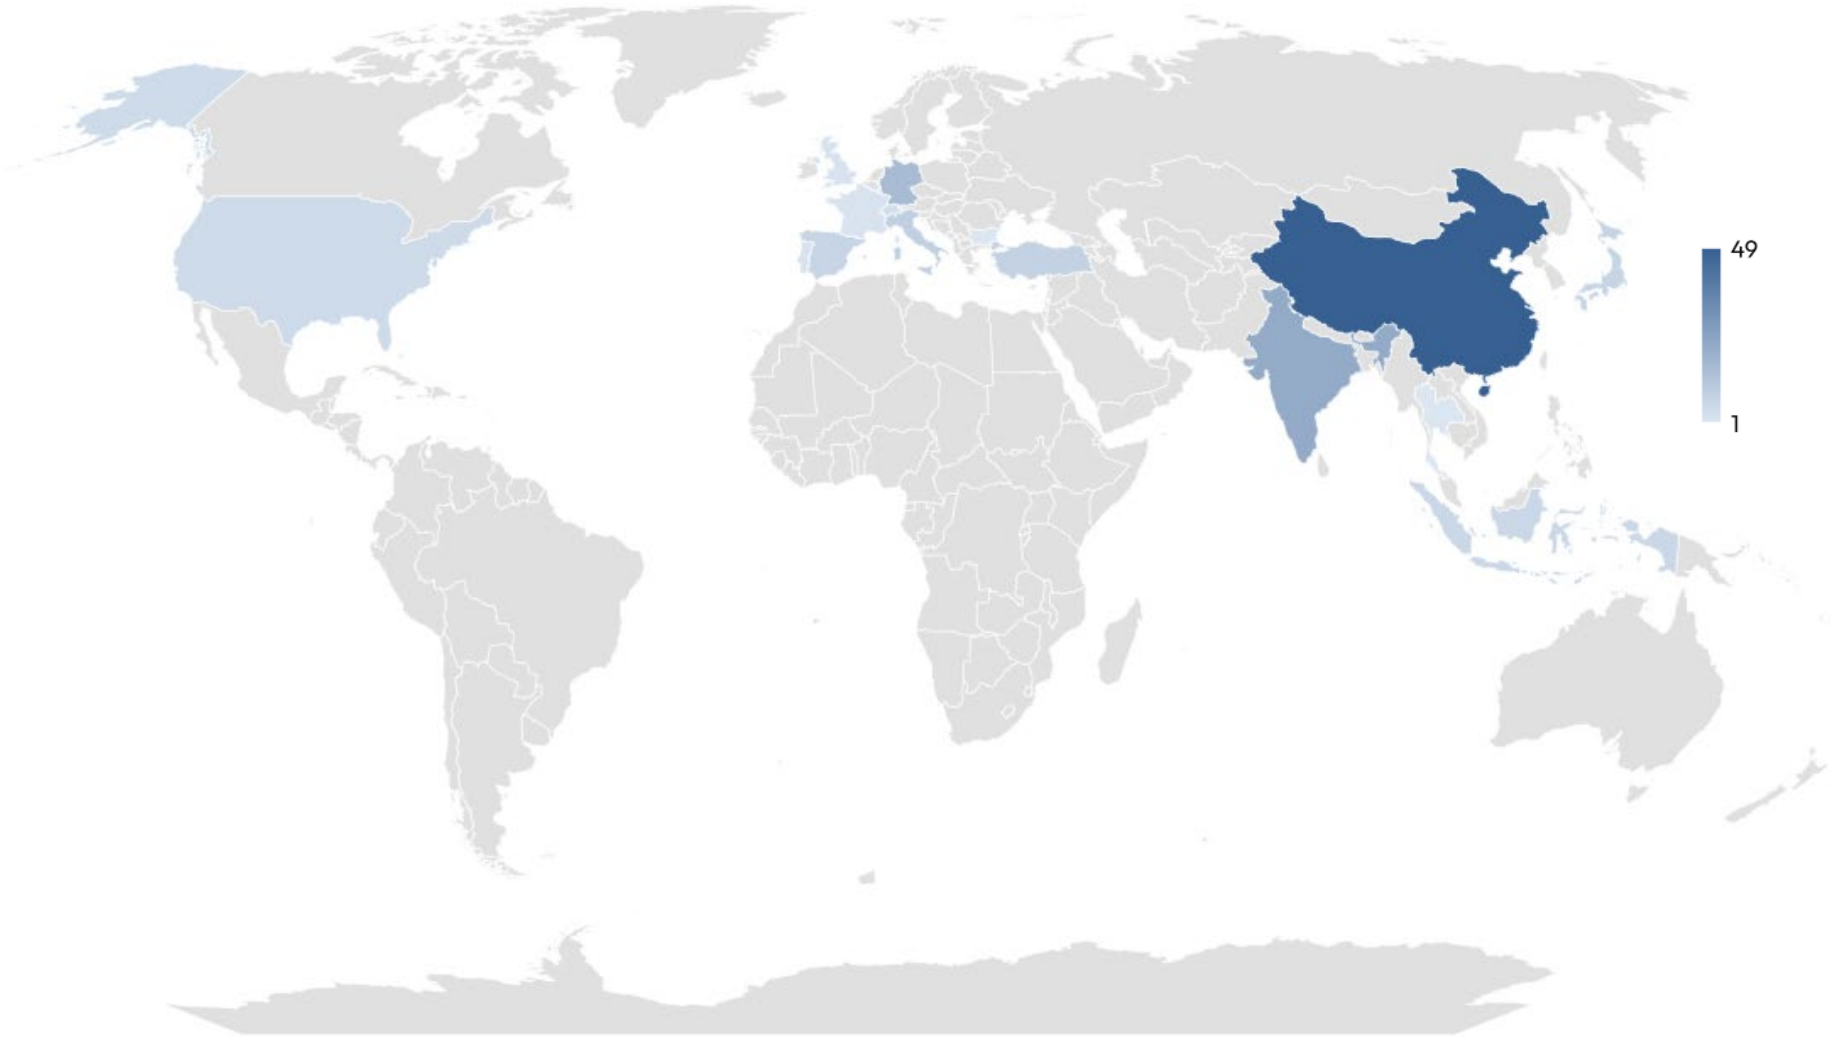
ECO PASSPORT

Control testing results

Summary over failed test reports ECO PASSPORT

	Failed test reports	Failed samples	Failed parameter
2022/2023	9.0 %	6.3 %	3.5 %
2021/2022	11.8 %	7.2 %	2.8 %

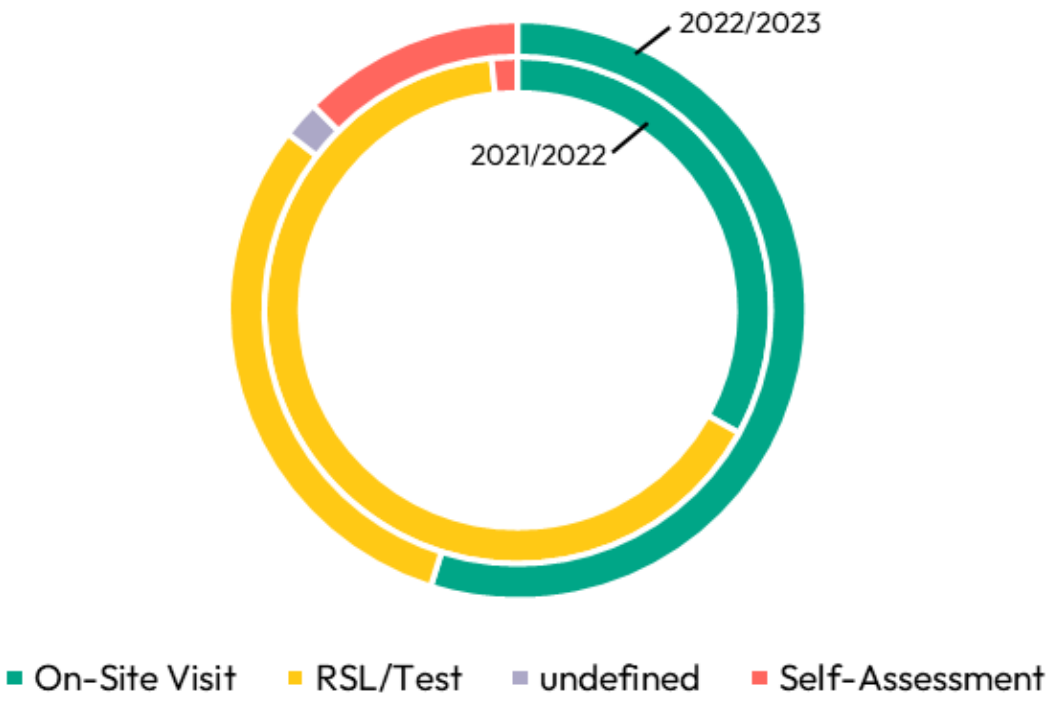
ECO PASSPORT - Certificate origin



The TOP 5 countries were

- China
- India
- Germany
- Italy
- Turkey

ECO PASSPORT - Conformity level



Self control rate: ECO PASSPORT

The self control rate of ECO PASSORT is very different to the self-control rate of STANDARD 100.
This is due to the lower number of tested samples and due to the different availability of the label articles in the market.

Nonetheless in the comparison between the institutes it can be observed that it is possible to not only check own certificates and that the institutes should try to test sample material from other institutes.

Round robin tests

Round robin tests 2022/2023

7 round robin tests performed (459 – 466, without 460) including 1 virtual application plus round tests for colour fastness 66

20
Institutes participated

5
real textile samples tested

6
reference solutions tested

From 309 (last year: 1’046) total results
15 (last year: 68) results have been OUT = 4.9% (6.5%)
294 (last year: 978) results have been IN = 95.1% (93.5%)

- It is getting increasingly difficult to procure textile samples for the round robin tests.
- We are currently still trialing professionally manufactured reference material. Results and cost proposal are expected in Q1 2024
- If you find a sample that is interesting, homogeneous and available in an ample quantity, we kindly request you to reach out to either the Testex RRT department or the OEKO-TEX® quality management team. Your cooperation is greatly appreciated.

- Due to the delays in 2022/2023, some parameters will be tested twice in 2023/2024.

On-Site Visits
STANDARD 100 & LEATHER STANDARD

Overdue On-Site Visits STANDARD 100

Due to the current intranet structure, the overdue audit data is still very unreliable.

While the performed On-Site Visits reports are uploaded automatically and have improved the data when compared to 2020, there are still cases (e.g. customers with STeP and STANDARD 100 certificates, customers who have STANDARD 100 certificates with different institutes, etc.) in which the customer is counted as overdue, even though a visit was performed.

We are trying to improve the data by uploading „Dummy“ files. However, this is done manually, making this solution only viable for smaller institutes.

Sustainable improvements to the data quality must be made in the audit management project.

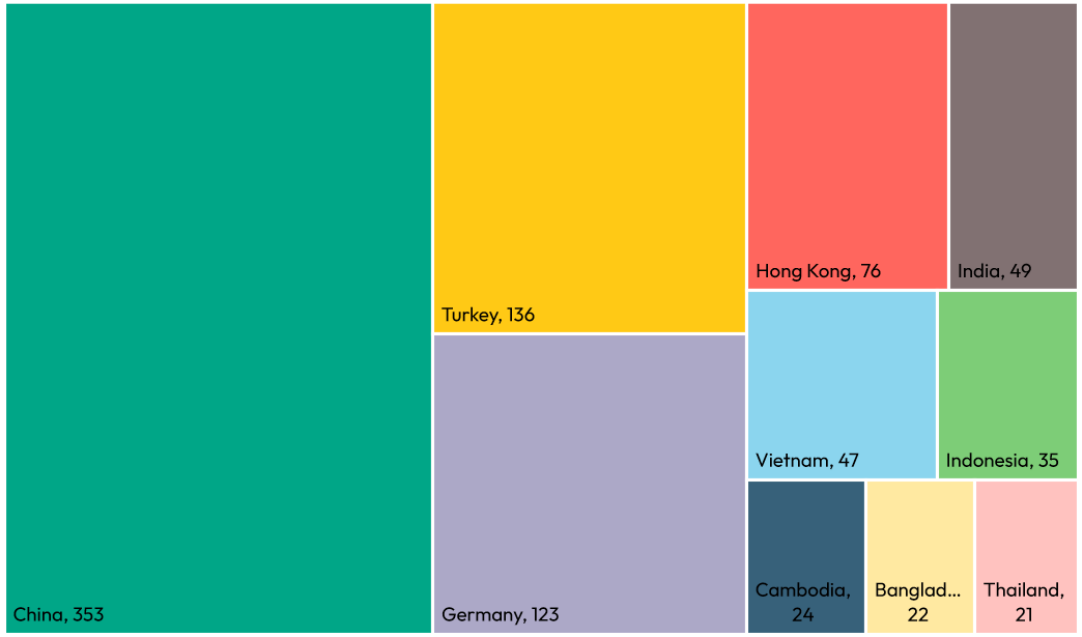
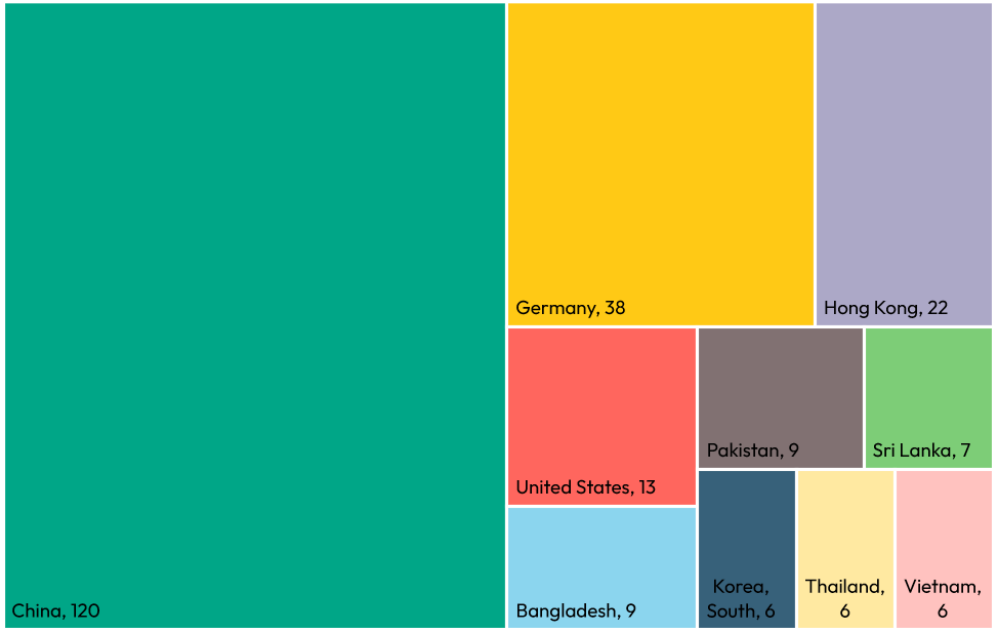
Self-Assessment development

Self-Assessments Top 10 countries 2021/2022



Total 2021/2022: 1128

Self-Assessments Top 10 countries 2022/2023



Total 2022/2023: 297

Performed On-Site Visits & Self-Assessments STANDARD 100 & LEATHER STANDARD

We are happy that the number of performed On-Site Visits is continuously rising. With the most significant impact of travel restrictions due to COVID-19 in 2020, we see a good recovery since 2021 to pre-COVID numbers.

We are happy that the Self-Assessments helped to bridge difficult times. To have Self-Assessments in the backhand for special situations (e.g. war zones, natural catastrophes, etc.) is valuable.

Please do not perform Self-assessments if an in-person visit is possible. An in-person visit should always have priority. It is also not entirely up to the customer. If it is generally possible to travel to a destination, then the visit shall be done in person.

Self-assessments are also not allowed for customers in countries where there is no representation of an institute. If you have an On-Site Visit in countries without representation, either organize travel to the country or contact the institute with a representation there. They can perform the visit for you.

Self-Assessments & On-Site Visits ECO PASSPORT

Changes in the ECO PASSPORT Self-Assessments and On-Site Visits

Starting at the beginning of 2023, the Self-Assessment has taken on a new level of importance, becoming a mandatory requirement for ECO PASSPORT. This change coincided with the November 2022 release of zdhc's updated conformance guidance, for which we had to implement an additional chapter to the On-Site Visits questionnaire. Further enhancements were made to the process by releasing new documents and additional guidance in April 2023.

Currently, a comprehensive review of the Self-Assessment questionnaire and its associated processes has started. The primary aim of this review is to streamline the procedure, making it more straightforward, efficient, and customer-focused, all while maintaining high standards of quality.
